

Leasing and Finance Advanced Management Portal (LAMP)

Our solution "Lamp" is an ideal package solution for leasing and financial business. Lamp covers the most of leasing business operations, such as quotation, application/approval process, contract management, disbursement, repayment, accounting report, cash flow management, and interface to banks.

Product Features

Flexible Lease and Finance Contract Management

Lamp provides flexibility to leasing firms. It enables leasing firms easily support various financing schemes, such as floating rate applicable contract, unbalance repayment contract and flexible interest calculation methods, or country specific contract schemes.

• Support Global Requirements

With its flexible architecture, **Lamp** can support country specific requirements usually coming from local government policies and local business practices. Lamp already supports complicated markets such as mainland China, Indonesia and other South East Asian countries.

Functionality for Management Layer

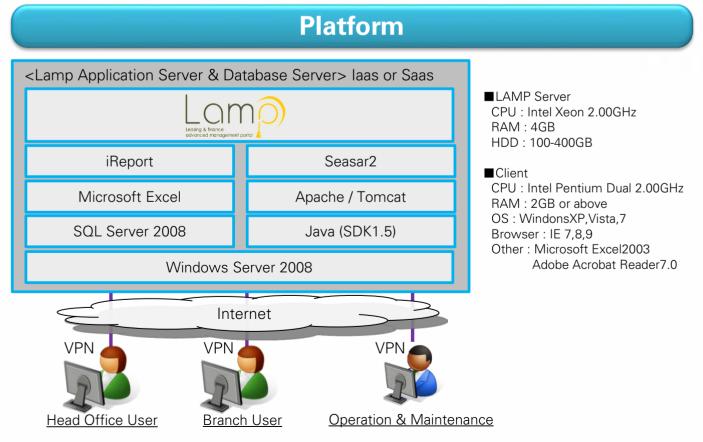

Lamp provides various managerial functions. For example, Lamp provides borrowing management functions so that CFO can easily see their cash flow and projection. Lamp also provides functionalities for application/approval process, client documentation management, aging schedule summary, ALM data, banking system I/F etc.

Comply with Corporate Governance Policies

Lamp can easily incorporate each firm's global and local corporate governance policies, such as approval policies, risk management, and system audit. Many company tend to have different global and local policies. Lamp's flexible functionalities enable leasing firms to support both requirements in one system.

Access through Web

Using secure WEB technologies, **Lamp** provides automated and centralized solutions to multi-location companies enabling access from branch offices and external partners. It lowers leasing firm's communication and transaction costs in the geographically scattered business environment.
